## PROPER WATER TESTING

Water tests performed by pool supply companies tend to be mediocre at best. We offer third-level testing that involves investigating for total hardness, total chlorine, free chlorine, pH, total alkalinity, stabilizer, phosphates, total bromine (spa) salinity, and other variables that affect the quality of your swimming pool water.

## DOCUMENTED TREATMENTS

Each chemical treatment and service is carefully and consistently documented. This sequential information gathering provides critical data to help technicians avoid chemical overdose, diagnose possible pool leaks, and identify environmental and/or seasonal variables. After every service, the customer is sent an in-depth report detailing everything that was performed during the service.

## CONSISTENCY

Consistent service is critical in maintaining a beautiful pool. Sea Breeze's Pool Technicians will be there each week--and on the same day each week. This helps customers plan events around pool service days and keeps the pool looking sparkling clean.
